

NGUYEN PHI TUAN AN

Senior Software Engineer (React.js / Node.js)

0927 183 879 • nptatdt@gmail.com • Tan Phu District, HCMC
[linkedin.com/in/19anim](https://www.linkedin.com/in/19anim) • github.com/19anim

SUMMARY

Professional experience: Full-stack Software Engineer with 4+ years across enterprise environments — currently a Senior Software Engineer delivering Panel UI features and internal automation for enterprise MFP systems, after 3+ years building workflow-based enterprise applications in vanilla JavaScript at Bosch. Comfortable with system design, RESTful API architecture, and automated testing; uses AI-assisted engineering (Claude CLI, OpenAI Codex) to support planning and implementation.

Personal projects: Independently design, build, and maintain full-stack products end-to-end outside of work, most notably FCO Hub — owning architecture, backend, frontend, data pipeline, and deployment solo. Demonstrates senior-level ownership (schema design, admin tooling, automated data pipelines, monetization) beyond my current job title.

CORE COMPETENCIES

Architecture & Design	Full-stack system design, RESTful API architecture, MongoDB schema design, admin/permission systems, session authentication
Frontend	React.js, Redux Toolkit, JavaScript (ES6+), TypeScript, TailwindCSS, responsive & data-intensive UI, drag-and-drop interactions
Backend	Node.js, Express.js, REST API design, Mongoose/MongoDB, service-layer architecture
Testing & Quality	Vitest, Node.js Test Runner, unit/integration testing for controllers, services, and data-sync pipelines
Automation & Data	Playwright, Cheerio, cron-based scheduling, retry handling, deterministic external data synchronization
AI-Assisted Engineering	Claude CLI, OpenAI Codex — specification-driven planning, implementation, refactoring, test generation, code review
Tools & Platforms	GitHub, Jira, Postman, VS Code, Netlify, Render

WORK EXPERIENCE

Senior Software Engineer Fujifilm Business Innovation Vietnam	07/2025 – Present
- Own delivery of new features for enterprise MFP (Multi-Function Printer) Panel UI, driving performance and usability improvements on embedded, resource-constrained systems. - Partner with QA and embedded engineering teams to design, review, and ship stable, scalable solutions for enterprise-scale hardware-integrated software. - Architect and build internal automation tools and browser extensions that eliminated repetitive manual operations, cutting recurring task effort by ~90% through standardized workflows and automated report generation. - Drive technical discussions, bug root-cause investigations, and feature-enhancement planning for enterprise-level applications.	
Frontend Developer Bosch Global Software Technologies	04/2022 – 07/2025
- Developed and maintained workflow-based enterprise applications on an internal platform integrated with Jira, supporting multi-team production usage. - Engaged directly with customers to gather requirements, analyze business needs, and translate them into tailored technical solutions. - Improved application stability, usability, and maintainability across multiple concurrent projects. - Led mentoring of interns, guiding technical growth and real-world development/collaboration practices. - Collaborated with international teams in Agile/Scrum delivery environments. - Recognized as Associate of the Month (Oct 2024) for ownership and customer collaboration.	
QA/QC Engineer Netcompany	01/2021 – 03/2022
- Performed functional and regression testing for a UK-based audit platform (Sedex), ensuring release stability. - Reported and tracked software defects; collaborated with developers and stakeholders to validate business requirements.	

EDUCATION

B.S. Computer Science — Ton Duc Thang University / Lughwa University (cross-border program)

CERTIFICATIONS & AWARDS

- OutSystems Associate Reactive Developer — Low-code platform certification (12/2024)
- IELTS 6.0 (Summer 2017)
- Associate of the Month — Bosch (10/2024)

FLAGSHIP PROJECT

FCO Hub — Full-Stack FC Online Companion Platform

06/2026 – Present

Full-Stack Engineer & Sole Architect | Self-Directed Product | 130+ commits, active development

Repository → github.com/19anim/fco-hub | Live Site → fcdaphim.netlify.app

A full-stack FC Online companion platform covering advanced player search, squad building, upgrade simulation, live team-color evaluation, and monetized content, built and maintained solo end-to-end.

- **Frontend:** React.js and TailwindCSS with reusable custom hooks (debounced search, document metadata/SEO, monetization feed), context-based auth state instead of prop-drilling, ad-block-aware ad rendering that collapses unfilled slots instead of leaving broken layout, and a drag-and-drop squad builder with separate view-only and edit interaction modes for shared squads.
- **Backend:** Node.js/Express REST API organized into routes, controllers, services, and models across every domain (players, assets, analytics, audit logs, admin), plus a permission-based admin system with session authentication and audit logging for protected actions.
- **Database:** MongoDB with Mongoose schemas for player data, enrichment workflows, team-color rules, monetization content, and analytics.
- **Data pipeline:** Automated external data collection and enrichment with Playwright and Cheerio, including retry handling and deterministic synchronization to keep player data current without manual work.
- **Testing:** Vitest and Node.js Test Runner covering UI helpers, API controllers, domain services, validation, search, and data-sync pipelines.
- **Deployment:** Frontend on Netlify, backend on Render, deployed and maintained independently.
- **AI-assisted engineering:** Used Claude CLI and OpenAI Codex for requirements analysis, technical design, and test generation, while retaining full ownership of architecture and final technical decisions.

Technologies: React.js, React Router, TailwindCSS, Axios, Node.js, Express.js, MongoDB, Mongoose, Playwright, Cheerio, Vitest, Node.js Test Runner

OTHER PROJECTS

Play and Share — Full-Stack Social Travel Platform

04/2025 – 12/2025

Solo Developer

Live Site → playandshare.netlify.app

A social travel platform for sharing destinations, building trip timelines, collaborative trip planning, and splitting travel expenses with friends, built and deployed solo.

- **Frontend:** React.js and TailwindCSS with Redux Toolkit for state management and DnD-Kit for drag-and-drop timeline interactions.
- **Backend:** Node.js/Express REST API handling user accounts, travel posts, timelines, and expense tracking.
- **Database:** MongoDB schemas for users, posts, timelines, and expenses; Cloudinary integration for image upload and media optimization.
- **Deployment:** Frontend on Netlify, backend on Render, with a cron-based keep-alive job to avoid cold-start delays on free-tier hosting.

Technologies: React.js, Redux Toolkit, TailwindCSS, Node.js, Express.js, MongoDB, Cloudinary, DnD-Kit, DaisyUI

E-Commerce Shop — JagerTheJagerShop

04/2024 – 07/2024

Solo Developer

Live Site → jagerthejagershop.netlify.app

- Full-stack e-commerce platform for browsing products, managing carts, placing orders, and secure checkout, with an admin dashboard for product and order management. **Frontend:** React.js, TailwindCSS. **Backend:** Node.js/Express REST API with MongoDB collections for products, users, carts, and orders. **Deployment:** Netlify (frontend), Render (backend).

Technologies: React.js, TailwindCSS, Node.js, Express.js, MongoDB

TAMT Wedding — Online Wedding Invitation

12/2024 – 02/2025

Solo Developer

Live Site → tamtwedding.netlify.app

- Online wedding invitation site with event details, schedules, location information, and RSVP management for guests. **Frontend:** React.js, TailwindCSS, Motion Dev animations, mobile-optimized. **Data:** RSVP handling via SheetDB (no dedicated backend/database). **Deployment:** Netlify.

Technologies: React.js, TailwindCSS, Motion Dev, DaisyUI, SheetDB
